7 Habits of Highly Effective Devops

Justin S. Morgan

Principal DevOps Engineer @ Dun & Bradstreet | Sr. Systems Engineer | PHP Developer
Jacksonville, Florida, United States

Summary

20+ years as a Systems Engineer, DevOps Engineer, Infrastructure Engineer, and Sr Networking Engineer.
10 years as a Full Stack PHP, Python, and JS Developer for back-end.
5 years of MEAN Stack Development with React, Node, Express, and Angular front-end experience.

Currently steering platform operations at Dun & Bradstreet, my role merges software development with robust DevOps strategies to build sophisticated AWS and GCP environments. Collaborating with cross-functional teams, we ensure seamless onboarding for application development teams, underpinning our success with Agile and Lean methodologies.

With CGI provided subject matter expert consulting in DevOps, CI/CD pipeline design/build, and automation of domain processes with custom code. Wrote custom ETL transforms solution from Oracle SQL to Hadoop transformation with bash. I worked on Legacy to Cloud Migration on Azure with Helm, Kubernetes, and infrastructure as code and CI/CD pipelines for container deployment.

With SingleComm Inc., we created a typescript microservices layer between the SIP Routing Server and front-end desk to abstract data-layer calls for their SaaS business call center platform with NodeJS; we also developed the Smooch API to mount Facebook and Whatsapp into one interface for AWS-hosted Call-Center Multi-Tennant WebApp.

Developed back-end components, connected applications to other (often 3rd party) web services, and developed and integrated plugins for
#PHP #Symfony #Laravel #Javascript #Angular #React

Experience

Dun & Bradstreet
Principal DevOps Engineer
October 2022 - February 2026 (3 years 5 months)
Jacksonville, Florida, United States

Experienced infrastructure specialist adept at navigating developer realms, CLIs, UIs, DevOps, and IaC. Focused on crafting GCP tooling solutions, blending software development acumen with DevOps, Systems and Network expertise. Skilled in articulating possibilities and limitations to senior stakeholders, managing expectations using Agile Scrum and Lean methodologies.

As a Principal with the Platform Operations team, work closely with application development teams to plan and support their platform onboarding process. Work with other platform engineers, networking, security and runtimes teams to design and build a large multi-project GCP environment and developer enablement tooling that internal application development teams rely on. Designing, developing and maintaining cloud-based infrastructure services, while continually implementing service improvements.

I facilitate requirement-setting for engineering, architecture, and support functions, encompassing landing zones, networking, CI/CD, security, observability, and service catalog offerings. Passionate about driving innovation and efficiency in cloud infrastructure ecosystems.

NASA Ames Research Center
Sr. Systems Engineer
October 2022 - January 2023 (4 months)
Sterling, Virginia, United States

Confidental Project for NASA - SBIR/STTR Program

The Small Business Innovation Research (SBIR) and Small Business Technology Transfer (STTR) programs are highly competitive programs that encourage domestic small businesses to engage in Federal Research/ Research and Development (R/R&D) with the potential for commercialization. Through a competitive awards-based program, SBIR and STTR enable small businesses to explore their technological potential and provide the incentive to profit from its commercialization. By including qualified small businesses in the nation's R&D arena, high-tech innovation is stimulated, and the United States

gains entrepreneurial spirit as it meets its specific research and development needs.

CGI
Sr. DevOps Analyst, Senior Consultant
July 2018 - January 2023 (4 years 7 months)
Jacksonville, Florida Area

SME - Subject Matter Expert DevOps
Currently supporting Code Writing, Build, Release and Automation

e-OSCAR is a web-based, Metro2 compliant, automated system that facilitates credit history dispute processing between Data Furnishers and Consumer Reporting Agencies, in accordance with the Fair Credit Reporting Act. Developed by Equifax, Experian, Innovis and TransUnion.

Many parts of this financial services project cannot be listed due to high security, for example, even the name cannot be mentioned on the internet. This can be discussed further on phone or video call.

Solution Development and Solution Continuous Improvement
Development of Infrastructure as code over a mixed bag of Overcloud technologies and operating systems including Splunk, Jenkins, Ansible, Bash and others in support of various project and operational needs.
Development of Infrastructure as code over a mixed bag of Under cloud technologies and operating systems including Microsoft Windows, Red Hat Linux, and others support various project and operational needs.

Operations and Support
Perform daily system monitoring, verifying the integrity and availability of system resources, systems, and key processes, reviewing system and application logs, and verifying completion of scheduled jobs
Investigate, troubleshoot, repair, and recover from system and software failures

DevOps Automation with Ansible, Jenkins, Splunk, Flyway, Test Automation, Linux, WebSphere, GitHub/Bitbucket, Java Tomcat, Jenkins, Groovy Scripting, Docker/Containerization, CA APM monitoring setup, Helm Chart, Terraform, Docker, Veracode, SonarQube, Maven, PowerShell scripting, Shell scripting, DevOps pipeline build experience., Agile and SDLC experience.

SingleComm

Software Engineer (PHP/Javascript)

November 2017 - May 2018 (7 months)

Jacksonville, Florida Area (Remote)

SingleComm is a venture-funded startup creating a Call Center as a Service building a SaaS platform that will change the way contact center businesses communicate with their customers. Our platform is built to scale and uses dynamic real-time communication technologies including WebRTC.

As part of the infrastructure, development team developed modules for use across the SingleComm platform as well as client-specific modules that allow telephony, media and transaction data to be manipulated and delivered to platform clients and third parties. I built software that allows data to flow between systems and endpoints.

Developed back-end components, connected those applications to internal and 3rd party web services, developed and integrated plugins for popular frameworks. Integration of user-facing elements developed by front-end developers with backend systems. Setup system with Babel Polyfill to compile Typescript to Javascript on AWS Lambda via Serverless.

Development Stack

MEAN Stack, PHP, NodeJS, Webpack, Mocha, Babel, Typescript, AWS Lambda Functions, MySQL, PostgreSQL, CouchDB, Ansible, AngularJS, Linux, Agile, Docker, Jenkins, FreeSWITCH, WebRTC, MongoDB, Express, Angular JS, Node.JS, JavaScript, JQuery, API Creation, Microservices, Backbone.js, Node.js, NPM, Angular.js, Babel, Webpack, React, Mocha, Gulp, GraphQL, Jasmine, Karma, Require.js

Digital Media Solutions Group

Full Stack PHP Developer, Lead Engineer - DevOps

March 2016 - November 2017 (1 year 9 months)

Jacksonville, Florida Area (Remote)

DevOps and Development role creating an AWS/ISP system that sent 12 million emails per day. Had Split duties between DevOps and Development, corrected problems with sever and SMTP email sending and delivery using Power MTA a large commercial Mail package. Created new features and upgraded older code in a mixed environment mostly Linux PHP code base but also Windows machines and ASP code.

Wrote system to automate complex setup for PMTA configuration file to generate IP/CDIR and matching domain names in 3000 line, 1k+ files in Power MTA setups. Setup Monitoring System and Bash/PHP scripts to create XML hooks for monitoring servers and mail flow/counts. Automated DNS into MySQL using PDNS for backend so that website, email servers were setup from start to finish automated. Had infrastructure on Amazon EC2, SQS Que, transactional email to local servers at multiple nationwide ISP providers as well, truly distributed environment. Worked with AS and BGP, IP routing, SSL and GRE tunneling between providers. System is now called Technology platform DMS Engage.

Designed, Architected and Coded a Bloom Filter hash table matching solution for comparing hashed email address for lists of millions of email addresses in minutes with under 2% false positive rates.

Development Stack
Full Stack Developer with Linux Apache MySQL, and PHP 5.3.3 with Symfony 2 Laravel Redis Docker Vagrant Microservices Ansible Javascript Ajax Angular GitHub JavaScript jQuery node.js Linux Windows Server NGINX Splunk with PHPStorm IDE and Sublime Text

Salt Life
Senior PHP Developer
July 2014 - February 2016 (1 year 8 months)
Jacksonville, Florida Area

Took CEO requested features from Concept to Wireframe then to Code and Deployment for Brig Hart. Brig Hart is the worlds number one Network Marketer. Managed a Portfolio of websites and businesses with Subscription, Marketing Publication and Live Conference products. Served as Technical Co-Founder for multiple businesses and models.

- Worked on HTML, CSS, JavaScript and their integration within a PHP environment.
- Involved in converting wireframes and Photoshop layouts into websites/ Applications using HTML5, CSS3, JavaScript, SASS, Angular JS, Bootstrap using W3C standards.
- Developed #PHP Models using Object-oriented programming (OOPs)
- Used Angular2, Angular CLI, HTML and Bootstrap, and JavaScript front-end.
- Worked with Bootstrap to develop responsive applications on Mobile and Desktop.

- Implementation of REST API services
- Implemented email and SSO integration using Node.js for backend and Angular.js frontend.
- Used PHPMyAdmin in writing Queries, Procedures, and Triggers using MYSQL.
- Utilized Components from Laravel framework in order to implement a cleaner and more robust application, which decreased development time.
- Worked with Laravel Framework and used design patterns like singleton pattern, factory pattern, and model view controller.

Development Stack
Expression Engine 2.x Maria DB(MySQL). Full LAMP stack development with Linux, Apache, MySQL, and PHP 5 with Laravel, JavaScript, Ajax, Angular.js, GitHub, Bitbucket, Java, HTML5, JavaScript, jQuery, node.js, Sass, SQL, Unix, Linux.

Ocenture
PHP Developer Full Stack
August 2009 - June 2014 (4 years 11 months)
Jacksonville, Florida Area

• Managed 100+ production websites ensuring 24/7 uptime and collaborating with hosting vendors for optimal web environment monitoring
• Administered security for internal and outsourced networks, maintaining LAMP environment and writing network documentation
• Developed and maintained diverse solutions with Eclipse for PHP, Code Igniter, and other programming tools

Beaver Street Fisheries
Sr Systems Engineer
December 2006 - August 2009 (2 years 9 months)
Jacksonville, Florida Area

• Managed 25+ physical and virtual servers, overseeing a 200+ user network and related equipment for the 3rd Largest Seafood Company in the US.
• Led the negotiation and allocation of IT resources, ensuring operational efficiency and project success.
• Defined and maintained the Application Release Roadmap, orchestrating regular and emergency patch releases for seamless deployment.
• Managed IBM Bladecenter server migration, Cisco Network backbone switch replacements, and Eaton UPS acquisition and install projects.

0-0x.com

SRE Site Reliability Engineer | Network Engineer | DevOps Engineer

August 2000 - December 2006 (6 years 5 months)

Jacksonville, Florida Area

• Streamlined processes to uphold system integrity and minimize downtime as a Site Reliability Engineer (SRE).

• Consulted on business development phases for a pre-IPO internet company, advising on product placement and scaling of services.

• Managed infrastructure for the largest provider of Medical MRI, CAT, and X-Ray's in Jacksonville, liaising with major hospitals.

Software602

Director of IT

February 1997 - October 2000 (3 years 9 months)

Jacksonville, Florida Area

• Led the design and implementation of network infrastructure for a European software company's US branch.

• Managed the rollout of 4 software products, including testing methodologies and website content creation.

• Expanded US and International coverage of computer resellers and distributors for 7 products, negotiating contracts with major companies.

Education

Charter College

Bachelor of Science - BS, Computer Science · (2001 - 2004)
